

## Migrating to Montaigne

I've kept this blog on Wordpress for as long as I can remember because that was what people used when I started it. Wordpress now feels like an overly complex tool for the type of blogging I want/have been doing. I found a new tool called Montaigne that uses Apple Notes as the tool for writing and storing content.

As I was manually copying content out of Wordpress and into Apple Notes my wife asked what I was working on. I said I was moving my blog over to a new tool. She said "Wait, you have a blog? What else don't I know about you?"
